Customer Reviews

Despite some significant shortcomings, this book is a good learning tool for those who expect to sit for the ECC's CEH exam. It was my primary reference during my exam prep, and I passed handily.. So if passing the CEH certification test is your goal, I do recommend it, and consider it better than any other book that I've seen for that purpose. In fairness, the author does not purport to provide more than is needed to pass the CEH certification exam: he notes in the introduction, "I didn't bother

to drill down into the basics in this book because it would have been 20000 pages long ...". Well I would not have wanted 20000 more pages, but an additional 20 or 30 could have been put to good use. As a minor example, one of the correct answers in my test was "bollards", those obnoxious concrete cylinders that crop up around various buildings in an effort to keep terrorist vehicles at a distance from the building. While I won't swear to it, I don't think bollards are mentioned in the book. More serious, as other reviewers have noted, are the errors in this book. For example, on p. 94, in a discussion of nmap, the author states that an ACK scan elicits no response from a closed port, but prompts an RST from an open port, implying that the ACK scan can distinguish open and closed ports. He also stated, on p.92, "ACK scans ... determine what ports may be open on a firewall". Now I have not tested his claims, but Fyodor, in Section 15.6 of his superb book on nmap, states the following with regard to the ACK scan: "This scan is different than the others discussed so far in that it never determines open or even open|filtered ports. It is used to map out firewall rule sets
